Dear Students,

Computer Applications is the most thriving discipline in computer science, growing at the crossroads of emerging trends. The Department of Computer Applications is dedicated to providing outstanding instruction, skill development, and instilling a sense of pride and confidence in our students. The goal is to provide the best teaching faculty, lab facilities, an exceptional development environment, and excellent infrastructure to equip our students with the most up-to-date technical knowledge and abilities. Every year, the department and students host a variety of technical and non-technical challenges to allow industry professionals to see the rising talent and provide professional chances to the candidates. It's not just about honing their technical skills; it's also about providing professional grooming and direction.

The Bachelor of Computer Application (BCA) Program is a three-year (six-semester) program. The primary goal of the BCA program is to empower young men and women with the requisite knowledge and abilities to pursue lucrative professions in the rapidly evolving field of information technology.

There is a huge scope in the field of BCA. One can do the job or can go for higher studies after the completion of the course. A self-employment option is also available. You can do freelancing or develop your own software if you have that much skill. There are many software MNCs (Multi-National Companies) that provide jobs to BCA graduates. If the candidate has work experience and all the necessary required skills then he/she can hold good positions in MNCs.
